

# TORINET

Through **TORINET** the ETF is establishing a **network of experts** to contribute to more sound and efficient development of policy in vocational education and training in ETF partner countries.

TORINET is a **platform for debating**, sharing ideas, experiences and lessons about evidence-based policy making in vocational education and training.

The ETF facilitates the networking and exchange around these **key questions**:

- What experiences and lessons learned are available and could be shared to enhance the role of evidence in policy making?
- What needs are there in countries to efficiently and effectively create and use evidence throughout the policy cycle?
- What tools, actors, networks should be developed and strengthened to build an evidence approach to policy making?
